C 337 P

CPA recommends pressurized mags on P-Skymasters because the bendix mags are too small (physically) for altitude flying. They will cause crossfiring when near the P337 service ceiling because the reduced electrical resistance of the ambient air inside the mags versus the constant (high) pressure inside the cylinders makes this possible.

The Cessna Skymaster is a United States twin-engine civil utility aircraft built in a push-pull configuration. Its engines are mounted in the nose and rear of its pod-style fuselage. Twin booms extend aft of the wings to the vertical stabilizers, with the rear engine between them. The horizontal stabilizer is aft of the pusher propeller, mounted between and connecting the two booms.

Cessna Skymaster - 3D Vehicle - 3D Data

The 337 Super Skymaster was introduced in 1965. The 337 had retractable landing gear and a dorsal air scoop for the rear engine. A turbocharged variant (T337) was introduced in 1966 and a pressurized variant (P337G) was introduced in 1973. Cessna produced civil and military variants of the 337. Reims in France also built several models of the ...

The Cessna 337 Skymaster is arguably the most commercially successful so-called push-pull attempt, at least in terms of numbers built. And although the 337 Skymaster isn't the most popular twin ever marketed, it's done just fine for itself and has achieved its primary goal: eliminating asymmetric thrust and simplifying the pilot's workload in the event of an engine out.
